When is a Lathe not a Lathe?

——When you change it into a Universal Milling Machine, or Universal Grinding Machine. And this can be done without the aid of any "black art".

The Moor Universal Milling and Grinding Attachment and Dividing Head will enable you to cut gears, keyways and all kinds of accurate universal milling work. You can also grind and finish internal or external work up to lathe capacity as accurately as can be done on the highest grade grinding machine.

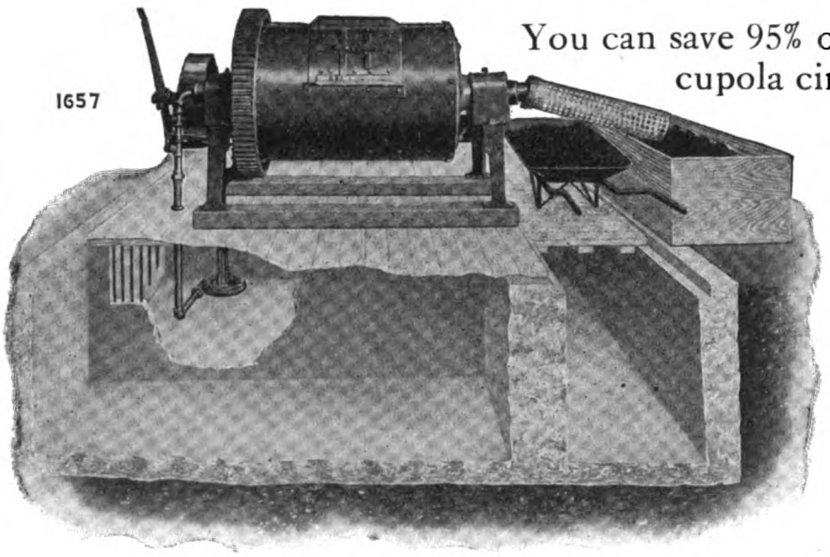
Motor gives twelve changes of speed to both milling and grinding spindles. No special fitting to the lathe is needed.

KEEP YOUR LATHE AT WORK EARNING ITS OWN DIVIDENDS.

Eccles & Smith Co.

San Francisco **Los Angeles**
Portland **Seattle**

This Mill Saves Iron



You can save 95% of iron contained in your cupola cinders by using one of our **MPROVED CINDER MILLS.** An installation like that shown will pay for itself in iron saved in a very short time. Substantial construction for heavy service.

Riveted Steel Tanks

We design, fabricate and erect cylindrical, rectangular, conical or round-bottom tanks for municipal, railroad or industrial service. Those who specify our steel tanks are assured of the best possible workmanship and immediate delivery. We are prepared to design, build and erect tanks to meet your particular requirements.

Riveted Steel Pipe

Riveted steel pipe is adapted to many uses, chief of which are municipal water systems, irrigation lines, hydraulic mining, and power lines. Its durability as compared with other types of pipe is unquestioned. The ablest engineers are now recommending its use where efficiency and low maintenance cost are desired.

Specify WESTERN of course

The favorable location of our three factories not only enables us to make prompt shipments, but also reduces the first cost through a reduction in freight. Your order will be executed at the factory from which the best rates can be secured.

SALES AND PURCHASING ENGINEERS

Carborundum Refractories

The selection of the right refractory brick is a problem that confronts many furnace users. Because of their unusual properties, Carborundum Brick and Refractory Cements have been found highly advantageous and economical in difficult locations which demand a refractory with extreme hardness and resistance to abrasion, high mechanical strength under heat conditions or resistance to severe flame action.

CARBORUNDUM Refractories are making astonishing records under many and widely varied conditions of high temperature work.

In the non-ferrous metal foundries, Carborundum Fire Sand furnace linings last weeks longer than ordinary linings with cracking, spalling and slagging reduced to the minimum.

For the lining of forge, heat treating, carbonizing, annealing and boiler furnaces, Carbofrax Brick are not to be compared in their performances with the ordinary fire brick.

Carbofrax Brick do not soften, break or fuse. There is little or no trouble from spalling. The same splendid refractory qualities are found in the Carborundum Refractory tile, muffles, saggers, and tubes.

Carborundum Refractory Cement *is* a refractory and it is indispensible in the work of laying up brick, in making repairs and patching.

If you are experiencing difficulty with the maintenance of your furnace linings, it will pay you to investigate the merits of Carborundum Refractories.

We shall be glad to quote prices and submit definite data at any time that you are interested.

DIE CASTING

Don't go east to get Die Castings when you can equal price and quality with better service, along with personal supervision right here on the Coast.

WE are manufacturing die castings that will equal in strength, solidity and precision measurements or tolerances any made in the United States, along with service excelled by none. We can make castings to suit or meet any condition where a lead, tin or zinc base alloy can be used, and owing to the pressure under which these castings are made a zinc base metal will answer the purpose of the average cast iron or machine brass casting and can be varied in tensile strength, elongation and reduction of area to suit the requirements of a specific part. This metal is non-magnetic, will take a high polish and can be electroplated readily by the standard methods. Our castings have proved to be stronger than brass in tensile strength.

In using die castings you practically eliminate all machine work, along with being assured of a uniform part, besides saving at least 75% of the cost of plating and polishing the part, with a cost in most instances not much greater than the plain sand casting, thereby saving your machining cost, along with a more uniform product.

See if some of the parts of the product you are manufacturing can be die cast. If so, write us and we will be glad to have our representative call on you and explain the principles of die castings.

You are invited to visit our plant and see our equipment and the castings we are producing.

Send us a blue print or sample of the part that is causing you the most trouble and expense to build and we will be glad to submit you our proposition.

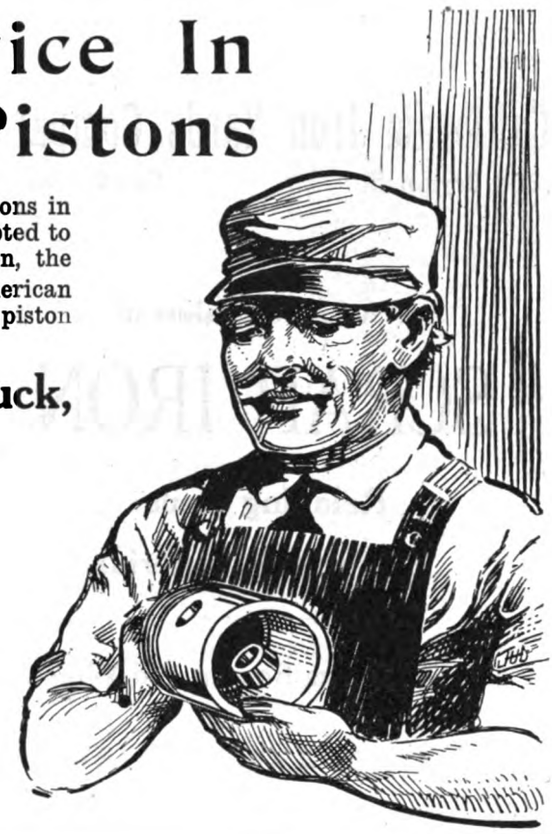
Unexcelled Service In Semi-finished Pistons



Mechanics are more and more specifying the Jahns pistons in their orders. Made of the best selected material and adapted to the varied needs of all motors operating by combustion, the Jahns is not only conceded to be the best piston on the American market but it is also accepted as the most convenient piston made.

Fits Every Make of Car, Truck, Motor Boat or Aeroplane

Every style is represented in the Jahns piston and it comes to you in semi-finished form ready for perfect fitting to any cylinder—old or new.

You'll find the Jahns piston a great convenience.
You'll find the Jahns Company gives service.

Our nearest representative will serve you.

Why Don't You Do This?

A number of enterprising firms on the coast have sent in subscriptions to METAL TRADES for their Managers, Superintendents, Foremen, Designers, Draftsmen, Mechanical Engineers, Machinists, Foundrymen, etc. This is a good suggestion for you. The closer your employees keep in touch with the new developments in the industry, the greater will be their value to you.

In the past year METAL TRADES has done much to promote business on the Pacific Coast and the next year will find METAL TRADES better than ever. It is worth many times $1.00 to anyone in the industry.

A Subscription to METAL TRADES would be a suitable and appreciated Christmas gift to your employees

Write us giving the name, address and vocation of the lucky ones, and their subscription to METAL TRADES will start with the January issue. You will get a bill in due course. Don't balk at a dollar when the returns will be a hundredfold.

HOLIDAY GREETINGS TO OUR FRIENDS AND PATRONS

We pray the prayer the Easterners do,

May the peace of Allah abide with you,
Wherever you stay, wherever you go,
May the beautiful palms of Allah grow,
Through days of labor, and nights of rest,
The love of good Allah make you blest,
So we greet you today-as the Easterners do,
May the peace of Allah abide with you.
